Education

Merrimack College

North Andover, MA

Master of Science in Computer Science (Software & AI Track)

Jan 2026 – Present

- Coursework: Python Programming, Algorithms, Backend Development Fundamentals, Discrete Mathematics

University of Massachusetts Lowell

Lowell, MA

Bachelor of Arts in Composition for New Media

Sep 2019 – May 2025

Experience

Northshore Education Consortium

Aug 2024 – Present

Instructional Assistant

Beverly, MA

- Provided real-time support in a fast-paced environment requiring problem-solving and adaptability
- Assisted with technology-supported instruction and basic troubleshooting of classroom tools
- Maintained structured data tracking systems for accuracy and consistency
- Collaborated with staff to adjust to changing needs and individual requirements

Behavior Learning Center

Oct 2022 – Jan 2026

Behavior Technician

Massachusetts

- Delivered structured, data-driven support while tracking and adjusting performance metrics
- Maintained detailed documentation for reporting and analysis
- Adapted quickly in dynamic environments requiring communication and decision-making

CVS

Jun 2022 – Aug 2023

Pharmacy Technician

Malden, MA

- Operated in a high-volume environment requiring accuracy and system navigation
- Resolved customer issues and supported workflow processes using internal systems
- Learned and applied new systems and procedures efficiently

T-Mobile

Jun 2020 – Jun 2022

Sales Associate

Saugus, MA

- Troubleshoot mobile device issues including connectivity, setup, and account problems
- Provided hands-on technical support for device configuration and onboarding
- Consistently ranked as a top performer in a competitive sales environment

Projects

ESP32 LED Audio-Visual System | *ESP32, C++, FastLED, Arduino IDE*

2026

- Designed and built an interactive LED matrix system using WS2812B addressable LEDs and an ESP32 microcontroller
- Developed custom lighting effects, including rain, snow, and storm animations, using FastLED
- Diagnosed and resolved hardware and power distribution issues to ensure stable performance
- Designed system architecture for future expansion, including button inputs and audio integration

Classroom Schedule Generator (In Progress) | *Python, JSON*

2026

- Designing a scheduling system to assign students and staff based on real-world constraints
- Planning logic for 1:1 support, group sessions, staff breaks, and schedule overrides
- Defining JSON-based data structures to support flexible scheduling templates

Banking System Simulation (Course Project) | *Python*

2026

- Developed a command-line banking system supporting account creation, deposits, and withdrawals
- Applied object-oriented programming principles and input validation for reliable functionality

Technical Skills

Languages: Python

Tools: Git, GitHub, VS Code, Arduino IDE

Systems: Windows, macOS, Microsoft Office, mobile device support

IT Skills: Software troubleshooting, desktop support, basic networking (NAT, IP configuration), remote access tools

Hardware: ESP32 microcontrollers, WS2812B LED systems, basic circuit design and soldering
